Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 2, 2003 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 22-33 are rejected under 35 U.S.C. 102(e) as being anticipated by Douglas, III (US 6,232,814 B1)

Douglas discloses, in Figures 1A and 1B, an electronic system comprising:

Art Unit: 2819

a ground (GND), a transmission line (105) having a first end (115), a second end (125), a first termination device (152) connected to the first end of the transmission line and connected to ground, a second termination device (162) connected to the second end of the transmission line and connected to ground, a first agent (151) connected to the transmission line, the first agent comprising a die having a first core voltage (V_{cc} in 111), the die comprising a pMOSFET (one of 151) comprising a source at the first core voltage and a drain connected to the transmission line, a second agent (161) connected to the transmission line, the second agent comprising a die having a second core voltage (V_{cc} in 121), the die of the second agent comprising a pMOSFET (one of 161) comprising a source at the second core voltage and a drain connected to the transmission line;

wherein the first core voltage is not equal to the second core voltage (it is inherent that energy saving processor in a computer system such as shown in Fig 1A have lower voltage than other component in the system);

wherein the first agent is connected at the first end of the transmission line (see Fig. 1B), and wherein the first termination device is integrated on the die of the first agent (see Fig. 1A);

wherein the second agent is connected to the transmission line at neither the first nor second end (middle) of the transmission line (see 130);

a nMOSFET driver (162) coupled to the transmission line, the nMOSFET driver having a source at the ground voltage; and

a combinational logic circuit (160) coupled to the nMOSFET driver.

Response to Arguments

Art Unit: 2819

Applicant's arguments with respect to claims 22-33 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
